

LE PHAM ĐỨC TRUONG

AI ENGINEER

082 669 6369

lephamductruong69@gmail.com

INTRODUCTION

I am an **AI engineer**, with over 3 years of studying and researching in the field of artificial intelligence, combined with the virtue of always being proactive in exploring and learning new things, I believe I can bring the most advanced artificial intelligence technologies to humanity.

WORK EXPERIENCE

FPT Software HCM - AI INTERN

Aug 2023 - Jan 2024

- Building an intelligent AI Research model.
- Processing data for the AI model.

Main tasks: Using Label Studio to process over 5000 data points daily and using Power BI to chart the data, supporting colleagues in data processing and project data statistics.

EDUCATION

FPT University HCM

2020 - 2025

- **GPA: 8.0**
- Bachelor's degree in Artificial Intelligence Engineering
- In-depth study of building AI processing models:
 - + Natural Language Processing (NLP)
 - + Image processing (CPV)

CERTIFICATIONS

- Natural Language Processing in TensorFlow Oct 11, 2022
- Data Science with Python & SQL Nov 8, 2022

TECHNICAL SKILLS

- **Model Training:** TensorFlow, PyTorch.
- **Back-end Development:** Django, Flask, WebSocket.
- **Database Management:** SQL Server.
- **API Development:** Postman, Swagger.

PERSONAL PROJECT

- Model for recognizing human emotions and gender.
 - Member number: 2 Role: Developer.
 - Technologies: **Deeplearning**(Model) and **Tkinter**(app).
 - Main tasks:
 - + **Data collection:** Search for facial data on human emotions and gender.
 - + **Train model:** Train 2 model human emotions and gender.
 - + **Combine model:** Connect 2 models of human emotions and gender.
 - + **Build app:** For users to connect the camera real-time to the processing model and return the results on the app.

PERSONAL PROJECT

- **Brain cancer classification model.**
 - Member number: 3 Role: Leader.
 - Technologies: **Deeplearning**(Model) and **Django**(API).
 - Main tasks:
 - + **Data collection:** Search for X-ray images of brain cancer tumors.
 - + **Build website:** Using the Django framework to build a website for users to upload images and receive results of brain cancer types on the website.
-

GRADUATION PROJECT

- **Applied AI for Society - Human Multi-tracking System.**
 - Member number: 4 Role: Developer.
 - Technologies: **Deeplearning**(Model) and **Tkinter**(App), **Websocket** & **Django**(API AI & BE).
 - Main tasks:
 - + **Data collection:** search for data human faces with and without masks.
 - + **Train model:** Train AI model to recognize human faces with and without masks.
 - + **Build app:** Using Tkinter to create an app for users to connect an IP camera and webcam to a processing model, returning results that draw bounding boxes around detected faces and display the identities of those faces on the drawn bounding boxes.
 - + **Build API(AI):** Using Websocket and WebRTC to create a front-end API that connects with the AI model, displays the model's status, and receives real-time data for the model to process and display real-time results.
 - + **Build API(BE):** Using the Django framework to create an API for the WEBSITE page for the Frontend to connect, such as registration API, account login, email verification, role, log data,...
-

ORTHER

- IT Support FPTU.
 - Working as a cameraman and video editor for organizations and clubs:
 - + FPT Event Club - The Way We Went (2020 - 2022).
 - + Câu Lạc Bộ Truyền Thông Cốc Sài Gòn (2020 - 2021).
 - + Volunteer Super Summer (Season II).
 - STUDENT RANKED EXCELLENT FOR 4 CONSECUTIVE SEMESTERS
-

TOOL

- Vmware
- Visual Studio Code
- PyCharm
- Google Colab
- Kaggle

INTERESTS

- Swimming
- Badminton
- Basketball
- Jogging
